the amulet remote

Voice control for Vista Media Center

The Amulet Remote is the controller Windows Media Center owners have been waiting for. Access all your media instantly, using simple voice commands and gestures. No more complex key sequences to remember.

Talk. Enjoy.

Where did I put that?

In today's world of digital TV, online music, and more photos than you can imagine, it's time to take back control of your living room.

Introducing the new Amulet Remote for Vista Media Center.

Now you can access all your media instantly, using simple voice commands.

Now we're talking

How does it work?

The Amulet voice-enabled remote control and software makes it all possible. Here's what happens:

- You pick up the remote and speak a command such as **"Play Artist Rolling Stones"**.
- The remote transmits your voice to the Amulet software in your Media Center.
- The Amulet software receives your command and instructs your Media Center to immediately start playing music by the Rolling Stones.

The Amulet Remote includes advanced position sensing technology, which means that the remote only listens when you talk to it, not when you're chatting with friends or family. Amulet understands your commands and ignores your conversations.

TELEVISION

Say **"Watch Channel Discovery"** and Amulet changes to that channel.

To watch the episode of Heroes you recorded last night, just say **"Watch TV Program Heroes"**. If you have already seen some of the item or you just want to see the best bit, you can ask Amulet to **"Skip Forward 30 Minutes"**.

Want to skip the ad breaks? **"Skip over ads"** and they're gone.

MOVIES & VIDEOS

To browse your DVD library, say **"Go to DVDs"** and use your voice or buttons on the remote to flick through your collection. When you decide what you want, call out the DVD name and that DVD will start to play.

MUSIC

Amulet lets you find any artist or band by speaking their name. Say **"Play Artist Crowded House"** and the music starts to play. Whether you have 20 or 2000 albums, Amulet will find what you are looking for.

Once you select an artist the Amulet software displays a list of all your albums on screen to allow you to select one.

When you select an album, Amulet displays the songs on the album to allow you to pick a song to play.

In fact, once you have chosen an artist, you can instantly select any song by that artist in your collection.

PHOTOS

Say **"Go to Photos"** and your digital masterpieces are spread out across the screen for you to flick through with your remote – or you can just say **"Show Slideshow John's Wedding"** to go straight to the collection you want.

How about an animated slideshow of your favourite photographic memories, set to music?

With the Amulet Remote, you can finally enjoy your media rather than being lost inside it. With a simple voice command and a gesture or two, you are in control. You don't need to remember where everything is as Amulet remembers for you. Just ask, and it's instantly available.
