How should I organize my downloaded videos?

Simply copy downloaded video files to the folders you have told Windows Media Center to monitor, and Amulet will detect them automatically. Movie filenames should simply be the name of the film. TV series episodes should follow the form "Series Name SxxExx Episode name", where Sxx and Exx are the Season and Episode numbers. For example, "Mad Men S01E12.avi" is Season 1, Episode 12 of the TV series Mad Men.

For other videos, such as home movies and unrecognised files, Amulet groups them according to the name of their containing disk folder.
