Talk. Enjoy.

# Where did I put that?

In today's world of digital TV, online music, and more photos than you can imagine, it's time to take back control of your living room.

**Introducing the new Amulet Remote for Windows Media Center.**  
Now you can access all your media instantly using simple voice commands.

## Now we're talking

### How does it work?

The Amulet voice-enabled remote control and software makes it all possible. Here's what happens:

- You pick up the remote and speak a command like **"Play Artist Rolling Stones."**
- The remote transmits your voice to the Amulet software in your Windows Media Center.
- The Amulet software receives your command and instructs your Windows Media Center to immediately start playing music by The Rolling Stones.

The Amulet Remote includes advanced position-sensing technology, which means the remote only listens when you talk to it — not when you're chatting with friends or family. Amulet understands your commands and ignores your conversations.

### TELEVISION

Say **"Watch Channel ESPN"** and Amulet changes to that channel.

To watch the episode of *Mad Men* you recorded last night, just say **"Watch TV Mad Men."**

If you have already seen some of the item or you just want to see the best part, you can ask Amulet to **"Skip Forward 30 Minutes."**

Want to skip commercials? Ask Amulet to **"Skip over ads"** and they're gone.

### MOVIES & VIDEOS

To browse your DVD library, say **"Go to DVDs"** and use your voice or buttons on the remote to flick through your collection. When you decide what you want to watch, call out the DVD name and that movie will start to play.

### MUSIC

Amulet lets you find any artist or band by speaking their name.

Say **"Play Artist Snow Patrol"** and the music starts to play. Whether you have 20 albums or 2,000 albums, Amulet will find what you are looking for.

Once you select an artist the Amulet software displays a list of all your albums on screen to allow you to select one. When you select an album, Amulet displays the songs on the album to allow you to pick a song to play. In fact, once you have chosen an artist, you can instantly select any song by that artist in your collection.

### PHOTOS

Say **"Go to Photos"** and your digital masterpieces are spread out across the screen for you to flick through with your remote — or you can just say **"Show Slideshow John's Wedding"** to go straight to the collection you want.

How about an animated slideshow of your favorite photographic memories set to music? Just ask Amulet.

With the Amulet Remote, you can finally enjoy your media rather than being lost inside it. With a simple voice command and a gesture or two, you are in control. You don't need to remember where everything is since Amulet remembers for you. Just ask and it's instantly available.

**Giving your media center a voice**
